WYNCODES CONNECTION TO YOU

Wyncode.Announces(Function(Node.js))

Node.js is the first web coding language that has two-way communication between the server and the user in real-time.

Are you tired of updating flash? Well with a move to Node.js, the problem will be taken care of. What Node does, is it simultaneously handles multiple connections to and from the server. One thing to note though is that it should be used alongside JavaScript applications.

Node.js was invented in 2009, and has since changed the world of backend development. Node.js has been adopted by every web browser and has become the preferred customizable server engine for some of the biggest companies in the U.S. including Microsoft, Ebay and Yahoo.

Learning Node.js will make you a well-rounded programmer. It is important to note that JavaScript is written into almost all backend code. Every week, there is a new framework for programmers to work with. Node.js takes that framework and breaks it down into bits that can run even through JavaScript updates. This allows for the code to run better on the front end, and backend, and eliminates the bugs that Twisted and EventMachine struggle with.

Finally, just like there are JavaScript Querys, there are Node packages. The repository currently contains more than 50,000 packages, making it easy to find a fix for an existing problem. Then with the skills to modify the code, you can edit and create an everlasting package that functions specifically for your server. All Node Packages are published under an open source policy, making them easily accessible for all companies.

The Node.js class will be the third course added to the Wyncode curriculum, after only one year of Wyncode's inception. The first Node course begins on March 18. Please note that the course is designed for Wyncode students who have completed the Immersive Web Development course, or experienced developers who can show a similar level of understanding.

For more information on the Node.js course, please email Wyncode at weare@wyncode.co, our visit our website wyncode.co.

More than 1 Million downloads

35,000 downloads per day

More than 10,000 companies are requesting Node.js

Node.js job opportunities have increased by almost 25,000 percent

Outstanding Wyncoder of the Month

Meet Ray Braff

The University of Tampa graduate has worked at Apple, Promedia Technology Services and A+E Networks. Now after completeing the Wyncode Immersive web design course he works as a web developer for MDLIVE.

Derek Miller to Teach iOS Class

Derek Miller is currently a professional iOS developer at YellowPepper, the leading mobile payments app throughout Latin America. He is well versed in the coding languages of Objective C, Swift, and Xcode. He also teaches Core Data, 3rd party API integration, and iBeacons.

Before working at YellowPepper, Miller was a student developer at Microsoft. While at Microsoft, he had a helping hand in driving nearly 750 Windows phone apps to the marketplace.

After graduating from Georgia Institute of Technology in 2014, Miller interned at Walt Disney Company as an Industrial Engineer Analytics Developer and later as a Enterprise Data Warehouse Business Analyst.

With a great foundation for his coding skills and great experience under his belt, Miller had no problem finding a job with Microsoft. Miller currently resides in Miami Florida, where he works for YellowPepper and is now one of Wyncodes Teaching Assistants for the iOS program.

Wyncode is lucky to have Miller as part of the Wyncode Family.

Calendar

April 2	April 6 – June 14	April 12 – July 1
Wyncode Ft. Lauderdale Open House	Immersive Web Development Cohort 5	Codeacademy and Wyncode partner for a 12-week, part-time, introduction to web development at The Lab
April 18	April 25	June 15 – Aug 13
iOS Info Session	Node.js Info Session	Immersive Web Development Cohort 6
